

BOSCH

Bolstering green manufacturing – one plant at a time

Where efficiency meets
sustainability

The Bosch path for tomorrow's smarter, eco-conscious utility systems

The clock is ticking. With increasingly tightening sustainability and industry regulations, macroeconomic hurdles, and a planet needing holistic protection – manufacturers today have a larger-than-life role in elevating the value chain. But how can enterprise leaders drive innovation that reduces environmental impact without sacrificing efficiency? The digital age demands tailored solutions – one-size-fits-all no longer works for smarter manufacturing. And navigating this complex landscape requires a partner who is fluent in the language of both sustainability and industry.

Our secret? A focus on optimizing utility systems – the often-overlooked key to unlocking significant environmental and economic gains. Over 100 satisfied clients across diverse sectors – from automotive to pharmaceuticals to food and beverage – trust Bosch SDS to deliver results.

Here's what's in store for you

Enhanced operational excellence

Leverage real-time data, advanced analytics, and edge AI with digital utility management that seamlessly aligns with your systems.

Increased green footprint

Integrate customized energy sourcing, including solar PV, hydrogen fuel cells, carbon offsets, and credits, to drive cost-effective, sustainable operations.

Elevated asset efficiency

Tailored solutions with SOTA, high-performance technologies for system utility re-engineering that bring down overall expenses while maximizing ROI and sustainability.

Substantial GHG emission reduction

Effortlessly align with global sustainability objectives with comprehensive and innovative solutions that pare down costs and GHG emissions.

Faster ROI*

Achieve an internal rate of return exceeding 25% within ~2.5 years with our eco-conscious utility solutions that use renewable or alternate fuels, incorporate carbon offset and credits, and more.

Stronger market positioning

Lead confidently in sustainable manufacturing by leveraging our consultation-led, data-centric solutions and services that minimize environmental impact and improve ESG compliance.

*Results are indicative and may vary depending on several factors

Our solutions

Our extensive experience in sustainable utilities and industrial plants enables us to customize solutions that suit your energy needs and long-term organizational goals. Through a comprehensive approach powered by enhanced monitoring, data analytics, and automation – we ensure energy savings, streamlined utility management, and stringent compliance with evolving sustainability standards, including carbon neutrality and reduced emissions.

Efficient heating systems

Advanced cooling systems

Integrated heating and cooling systems

Humidity control systems

AI-driven control systems

Why Bosch SDS

Up to 30% energy savings	Flexible commercial models	Dedicated industry experts and sustainability partners
Adopt energy-efficient equipment supported by predictive maintenance and real-time monitoring.	Choose the best-suited models for your business needs with flexible and transparent payment structures.	Exceptional partner and expert network with a comprehensive understanding of your energy goals and business needs to tailor end-to-end solutions.

Bosch SDS in action

Revving up energy savings with a hybrid ASU system

Reduced utility costs up to USD 52.5 Lakhs per annum

Significant reduction in CO2 emissions

Decreased OPEX and CAPEX

Discover how Bosch SDS enabled a leading automotive manufacturer to elevate energy efficiency and reduce cost overruns by digitally transforming their ASU units.

Fast fashionable savings with Bosch Phantom

~17%-48% energy savings across diverse retail stores

Improved HVAC operating points and greater control over systems

Enhanced energy savings and transparency through total asset utilization benchmarking and optimization

Discover how Bosch SDS enabled a leading global fashion retailer to get a cross-sectional view of energy consumption, ensuring energy transparency, behavior-based savings, and asset benchmarking.

Cooling costs, heating profits with Bosch SDS' customized energy-conservation solution

Up to 14% in energy savings

Improved energy and operational efficiency

Lowered maintenance costs and efforts

Discover how Bosch SDS enabled a dairy manufacturer to streamline energy usage and conservation, offset budget overruns, and improve product quality – in a sustainable way.
